

## Point protection for high value items

There are many variations of fog protection depending on the furnishings and valuables contained within a room. Point protection is the perfect choice for instant protection of the most valuable items.

**Point protection: The highest value first**  
With point protection the valuables are – *in only 5 seconds* – wrapped in a dense, opaque and white veil of dry and harmless protective fog.

**Point protection:** The direction and development of the fog in point protection is illustrated with the arrows. After the first instant protection of the most valuable items (1) the fog spreads to the rest of the room (2). Wall and floor effectively "bounce" the fog in all other directions.

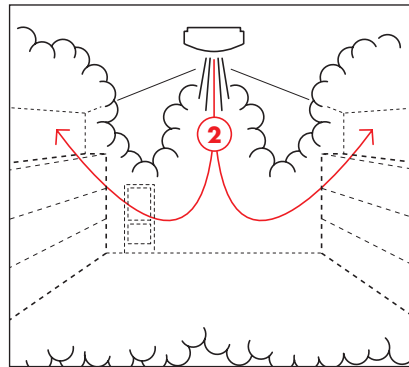

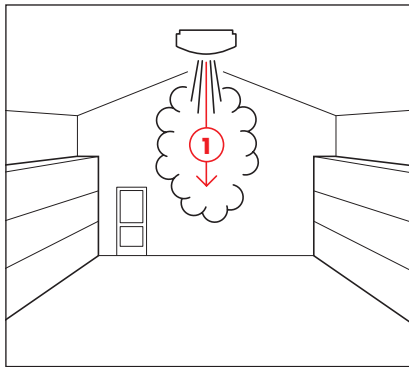

Point protection is ideal when you want to secure **part of a room** – e.g. instantly covering strongboxes, jewellery showcases, cigarettes and spirits, the car dealer's key case etc. Among others Matas (Danish drugstore chain) uses the technique with point protection to protect displays of expensive makeup and perfume products. Also many DIY centres use point protection to secure electric power tools.

### The additional effect of point protection

In less than 20 seconds the fog will start to spread to other parts of the room. Depending on the size of the room and the Fog Cannon's output capacity it can cover and secure the whole room totally!

If the room is very big additional PROTECT Fog Cannons can be installed for total protection. Full security with both specific and total protection creates the most difficult conditions for a burglary.

## Total protection is like an impenetrable barrier

**Total protection with fog** is about only one thing: As much fog in the room as possible so that everything is covered as fast as possible. The number of Fog Cannons and their capacity is calculated according to the size of the room and the furnishing.

You can also choose **total protection** of a room or a building.

Total protection can be obtained by one, or **several, bigger Fog Cannons**. Even the biggest production buildings and storerooms can be total-protected with fog.

Total protection is used in all sectors and premises, but especially in warehouses and in office blocks.

If the problem is ram raids or vandalism use total protection with fog so that the intruders cannot see anything.

If one room in a building houses valuables it is recommended to activate the Fog Cannon in the room and the burglar alarm at the same time. Before the burglar reaches the protected room it has been filled with fog making it impossible to steal anything.

### Some of PROTECT's references

In the retail trade it is typically wine, spirits and cigarettes that are targeted by burglars. Among others, SPAR in England and REMA 1000 in Denmark have secured exactly these kinds of goods with fog protection. This is also what petrol stations do, for example JET in Germany and Q8 in Denmark. Optician shops are equally attractive to burglars. Especially the expensive designer collections of sun glasses are sought after. A number of shops in Nytt Syn, Profil Optik and Thiele (Danish optician chains) have all invested in fog protection from PROTECT.

# The world's largest manufacturer of fog cannons

Since Protect was founded in 2001, we have produced more than 30,000 fog cannons all over the world for a wide variety of end users.

### 100% Danish-owned

Our ISO 9001:2008-certified manufacturing facilities are located in Denmark, as are our development, sales and marketing and administration units.

We currently export to 40 countries – locally our contact to end users takes place through nationwide networks of certified alarm installation contractors.

Our products comply with European norms for fog cannons (EN 50131-8), so you can always feel safe and secure.

### We will always be the best!

Innovation has top priority and is the main reason for our position as the world's leading manufacturer of fog protection units.

We will always be the first and the best when it comes to technological developments, and we will spend every day making life easier and more secure for all our customers in all links of the sales chain. This means we are always willing to listen to, ask questions to and collaborate with all stakeholders.

Many years of hard work – and many disappointed burglars – have earned us a number of awards, e.g. for best product, most installation-friendly security product and best entrepreneur.
